ORDER PROCESSING

Flexx *Order Processing* enables you to be in control of every phase of a customer's order, tracking it through fulfilment, invoicing fulfilment and invoicing. With complete product and customer information just a click away, Flexx *Order Processing* provides the results you want—better cash flow and customer satisfaction.

To operate smoothly, it is essential that your business has a convenient and flexible method of creating sales orders. Product verification with quick access to inventory levels at each warehouse (as well as substitute products) enables the quickest response to a customer's order needs. Order fulfilment, shipment and tracking are performed efficiently through any factory direct or back order situation. Flexx *Order Processing* handles all of these situations with ease.

Better cash flow, better customer satisfaction, better margins and better control—Flexx *Order Processing* can help you achieve all of these. And the process is not complicated, yet includes flexible features such as automatic price look-ups, customer credit details, discounting, automatic back ordering, customer returns and credits, and complete order tracking. Flexx *Order Processing* is truly easy to learn—and truly powerful to use.

Order Processing offers a wide range of tracking and order fulfilment features that are fully integrated with the Flexx suite of modules, ensuring accurate billing, stock ordering and sales analysis. And sales history and inventory movement history can be stored indefinitely in the Flexx *Data Warehouse*, providing you with a powerful planning resource.
